GREYWATER launches Grewa-R-S

GREYWATER, a Mumbai-based specialised technology company that pioneers the next generation products for sewage and wastewater treatment has launched Grewa-R-S, a next generation, packaged and fully automatic sewage treatment plant that is strategically priced at the price of conventional technologies available in market.

"At GREYWATER we strive to fundamentally change the way the world treats sewage, wastewater and effluent by applying technology to develop revolutionary products that provide a one point solution to all the hassles associated with recycling sewage and wastewater. After a year of R&D efforts, we are now proud to announce the launch of Grewa-R-S, a next generation, packaged sewage treatment plant

that has the capability to provide consistent recycle-reuse ready water at a considerably lower cost per liter and at same capex expenditure as conventional technologies in market today," said Vikrum Kishore, Executive Director .

The revolutionary Grewa-R-S is the next step in evolution of the next generation Grewa-R range of products of GREYWATER. Developed on the philosophy of providing best in class, packaged, fully automatic and single tank SBR technology, GREWA-R-S is equipped with unique features such as capability to handle variable loads (10 per cent to 110 per cent of design capacity), low footprint, low operating and maintenance cost (up to 50 per cent lower than conventional technology) and fully automated and robust operations.
